NAME

```
parsediasql - Command-line interface to Parse::Dia::SQL
```

SYNOPSIS

```
parsediasql [OPTIONS] --file FILE --db DB
```

OPTIONS

```
file                 - Filename of Dia file
db                   - Database type (e.g. 'db2')
ignore_type_mismatch - Allows foreign keys to have a different
                       type than the primary key it references,
                       if true. Default false.
uml                  - Use UML interpretation of the diagram,
                       default is ERD interpretation.
loglevel             - Log verbosity, valid values are
                       DEBUG|INFO|WARN|ERROR|FATAL|TRACE|ALL|OFI
backticks            - Use `backtick` notation (mysql-innodb on)
htmlformat           - Optional custom format file (html only).
```

DESCRIPTION

Dia is a diagram creation program for Linux, Unix and Windows released under the GPL license.

parsediasql is a Command-line interface to Parse::Dia::SQL

Parse::Dia::SQL converts Dia class diagrams into SQL.

TODO

- Add options that correspond to %param in Parse::Dia::SQL::new

SEE ALSO

Parse::Dia::SQL

AUTHOR

Parse::Dia::SQL is based on *tedia2sql* by Tim Ellis and others. See the *AUTHORS* file for details.

Modified by Andreas Faafeng, `<aff at cpan.org>` for release on CPAN.
